

CTCLC Weld-a-saurus Camp 2021

The Career Technology Center of Lackawanna County will be hosting a welding summer camp called Weld-a-saurus. Students entering grades 7 or 8 in the fall of 2021 are eligible to attend. Campers, during the first week, will learn how to use a MIG welder and basic welding techniques to transform a steel plate into the skeleton of a dinosaur. Campers who attend the second week will have an opportunity to further their skills in an advanced session by taking on a slightly larger project.

Campers will have fun learning about:

- Safety precautions
- Beading and padding
- Gas metal arc welding
- MIG welding
- In-demand technical careers with local opportunities

A flyer is enclosed/attached along with the application/registration forms. Please note that there are different registration forms for week one and week two. To attend week two, you must have completed week one of the camp. Feel free to copy them as you need them. A \$25 deposit is required to hold your spot for each week. Deposits will be returned once participation is complete.

If you need more information, or have questions, please contact me.
